Abstracts

Cosmetic threads are specialized threads used in cosmetic surgeries for lifting the sagged skin and obtaining a smoother- & younger-looking complexion. The procedure is minimally invasive and is used these days as an alternative for the surgical procedures. Most of the population in the age group of 30–60 are eligible for the thread lifting procedure. Generally used materials in the manufacturing of cosmetic threads include PDO (polydioxanone), PLA (polylactic acid) and caprolactone threads. The procedure is gaining popularity these days due to its shortened procedure time of less than an hour. The procedure is also popular as a lunch hour face lift or weekend face lift.
