Abstracts

The COVID-19 pandemic has been declared as a global health crisis by WHO and is one of the greatest challenges ever faced by mankind since World War II. After its emergence in Wuhan, China by the end of December 2019, the virus has spread across 184 countries through the first quarter of 2020. Incidence of the infection is observed to be increasing daily in the Americas, Europe, and Africa. Although several strains of coronavirus have been identified and studied earlier, the new disease has been caused due to a novel strain and in no time turned into a pandemic due to a high R-naught. The virus is expected to impact the socioeconomic and political landscape of the countries, consequently leading to adverse economic impact.
