Abstracts

The general care floor refers to a hospital unit where patients receive 24-hour general medical attention and/or post-surgical treatment. Usually, a GCF ward includes patients who require less care than that given in Intensive Care, Critical Care or speciality care units. Unfortunately, the economic downturn combined with ICU staffing and bed shortages has led to patients being moved earlier than desired from the CCU to the GCF. While GCF treatment is certainly less expensive, this unit is not fully equipped to provide continuous patient surveillance needed by higher priority patients. The general care units frequently have a higher patient to nurse ratios, lesser access to continuous surveillance technology, and reduced patient visibility because they have private patient rooms coupled with extended hallways. Thus, there is a need for medical organisations to focus on their speciality care department more which is why the Critical Condition Surveillance Systems market has become important recently.
