Abstracts

Cruciate ligaments are a pair of ligaments that hold the bones of the knees together. Cruciate ligaments are also called cruciform ligaments as they are arranged in a crossed or an X formation. In a cruciate ligament repair surgery, a surgical tissue graft is used to replace the torn or injured cruciate muscles. The most common grafts are autografts using part of your own body, such as the tendon of the kneecap (patellar tendon) or one of the hamstring tendons, or the quadriceps tendon above the kneecap. Another choice is allograft tissue, which is taken from a deceased donor.
