Cryovials or cryogenic vials are designed for storing biological material, human or animal cells, at temperatures as low as -196°C but should be used only in the gas phase of liquid nitrogen. Sometimes, sterile cryogenic vials are designed for storing biological material in extreme temperatures. The thermal resistant tools come in a wide range of volumes with convenient graduation marks and labeling areas for easy testing. In addition to conical and round bottom styles, free-standing cryogenic vials feature skirted or starfoot bases that support one hand operation. Either internal or external threaded caps come in various colors for instant specimen identification.
