Abstracts

Ceramic fiber is a small-diameter filament or thread made from ceramic materials, usually alumina and silica. It is utilized for electrical, sound, and thermal insulation in lightweight units. Alumina and silica are found in equal amounts in most ceramic fibers. Ceramic boards and blankets with high temperature resistance are used in the development of ships for general heat containment and to limit the risk of fire propagation. Ceramic fiber products are utilized in the metal sector, commercial and residential appliances, furnace interiors, and space transportation, among other applications.
