Abstracts

Constant-current diode is an electronic device that limits current to a maximal specified value for the device. It is known as current-limiting diode (CLD), current-regulating diode (CRD).

These diodes consist of an n-channel JFET with the gate shorted to the source, which functions like a two-terminal current limiter or current source (analogous to a voltage-limiting Zener diode). They allow a current through them to rise to a certain value, and then level off at a specific value. Unlike Zener diodes, these diodes keep the current constant instead of the voltage constant. These devices keep the current flowing through them unchanged when the voltage changes.
