Robots have been helping to improve productivity and security, and attacks on robots can cause personal injury or at least cause serious business disruption. Robots promise to increase productivity and reduce risk in many organizations. Network security in robots can protect a company from hackers who may cause security problems or defects that cause the company losses. Ensure that robots and systems are properly hardened against attack before they are integrated into the production environment, and that by considering network security deployment they do not risk introducing the same negative effects into their environment.
