Day/Night-Vision Data Display systems are widely used in the military and aerospace industry which require data storage and visualization of Day/Night-Vision helmets or goggles. The information is displayed on the screen of the lenses, mirror or screen created specifically for viewing the data and also stored the data in a drive. The Day/Night-Vision equipment's are of various types including night vision goggles, Day/Night-Vision helmets, periscope, guns and rifle scope, night vision binocular and others which has applications in various industries such as military, aerospace, aviation, police, security and surveillance and others. This technology is initially developed for military purposes and later found application in air force and civil aviation. With the advancement of technology, this technology have found applications in several other industries. Most of the equipment's has a display attached in it where some products such as periscope used in tanks has a separate visual screen which can be removed. Portable display units has gained a significant market share which is used in combat operations. These portable displays can be installed anywhere away from the equipment. These displays usually has a range of 50 to 100 meters and come with a receiver which receives signals transmitted by Day/Night-Vision equipment. Some of the displays has large ranges and can catch signals coming from few meters to kilometers. Day/Night-Vision Data Display systems market is expected to witness an escalating demand among various industries because of its broad applications and features.
