Abstracts

This report focuses on Decanter Centrifuge used in Mining and Minerals.

Hydrometallurgical processing of ores is highly varied and has become an increasingly important technology in the production of today's precious and base metals. Processing plants in the form of flotation or leaching installations selectively enrich the specific metallic components.

Typical Products

- Gold and silver
- Lead and zinc
- Nickel and copper
- Platinum
- Further rare earth elements. There is a broad variety of applications for industrial minerals to be used as pigments or fillers. it ranges from the ceramic industry to the materials industry and from the cosmetic or food industry to the paper and paint industry.

Typical processes are purely mechanical operations such as milling, grinding, separating and degritting while other processes include chemical operations such as crystallization or precipitation. in general, the final products must be of the highest purity and must have a well defined particle size distribution. Typical Applications:

- Kaolin
- Ground calcium carbonate (GCC)
- Precipitated calcium carbonate (PCC)
- Titanium dioxide
- Barium sulfate
- Zinc sulfide
- Aluminum hydroxide
- Many others
