Cardiovascular diseases present a wide range of blood disorders (haemostasis) that influences the development cardiovascular co morbidities. Patients exhibiting such symptoms are often prescribed on anti-thrombotic medications to prevent the onset of adverse cardiovascular events arising as a result of the sudden rise in blood coagulation factors. In addition, patients undergoing cardiovascular surgery also present haemostatic disorders along with their existing disease state besides their adjunctive medication or the presence of any coagulation disturbances induced by a cardiopulmonary bypass surgery. POC (Point of care) coagulation testing monitors are available for monitoring preoperative coagulation especially in procedures involving cardiovascular surgeries such as cardiac bypass, angioplasty, etc.
