## Abstracts

Deep Frying Oil Tester is a measuring device with which you can determine the quality of various types of oil. This cooking oil tester is also successfully used by food inspectors. A measurement is carried out directly in hot fat. For this, the measuring tip is held directly in a fryer or the like. Thus, fast measurement results are guaranteed. The oil temperature in °C / °F and the oil quality in percent PC (polar compounds) are determined within a few seconds. The PC value is a measure of the thermal-oxidative stress level of a frying oil.
