Abstracts

Dental articulators are used in dentistry and these mechanical devices are used for mandibular and maxillary casting are fixed to reproduce recorded position of the maxilla with regard to the mandible. Dental articulators aids in the construction of fixed prosthodontics restoration such as crowns, bridges and onlays, orthodontic appliances, and removable prosthodontics appliances such as dentures. Dental articulators also represent as temporomandibular joint and jaw members to which mandibular and maxillary teeth are attached to drive jaw movement. Dental articulators are advantages as they are used to study teeth occlude for diagnostic and treatment planning, also permits fabrication of occlusal surfaces during removing or fixation of prostheses or dental restoration, and in the diagnosis of occlusion state in both artificial and natural dentition. There are various type of dental articulators available in the market such as simple dental articulators, semi-adjustable dental articulators, and fully-adjustable dental articulators. Simple dental articulator permits only single hinge movement and no lateral movement, semi-adjustable dental articulators allow adjustment of condylar inclination and Bennett angle and are suggested for dental restoration procedures, and fully-adjustable dental articulators permit maxillary cast to be fixed on articulators and records the angle between maxilla and hinge's axis of rotation of mandible.

This report contains market size and forecasts of Dental Articulators in Global, including the following market information:
