Abstracts

Dental crowns and bridges are prosthetic dental devices used for dental restoration. They help to alter the shape and size of tooth, offer strength, and improve aesthetic appearance. Some of the common dental problems include bad breath, tooth decay, gum disease, mouth sores, oral cancer, and tooth sensitivity. Most crowns and bridges are made of porcelain or ceramic material that matches the color of the natural tooth. Other materials include titanium, gold, acrylic, and metal alloys. These are mounted or cemented onto existing tooth, which can only be removed by dentists.
