Abstracts

A glass ionomer cement is a dental restorative material used in dentistry as a filling material and luting cement, including for orthodontic bracket attachment. Glass-ionomer cements are based on the reaction of silicate glass-powder (calciumaluminofluorosilicate glass) and polyacrylic acid, an ionomer. Dentists must make sure to follow the manufacturer's directions for each type of cement, in terms of mixing, using the correct ratios and subjecting it to the correct temperatures. There are five types of dental cement: zinc-oxide eugenol, zinc phosphate, polycarboxylate, glass ionomer and composite resin.
