Abstracts

Dextrose Anhydrous is a form of glucose made from starch of corn. Just like sugar, it is sweet in nature but contain around 20% less sweetness as compared to sugar made from sugarcane. Dextrose Anhydrous does not contain any water, produced in crystalline or powder form. Dextrose, like fructose and glucose, is a monosaccharide also known as simple sugar. Simple sugars can be combined to produce complex sugars such as sucrose. Human body metabolizes each unit of simple sugar whereas complex sugars are not easily metabolized by body. Dextrose Anhydrous is widely used as a nutrition supplement and a sweetener in food production. Apart from food, it is also used in beverage, animal feed, pharmaceutical and various other industries.
