Abstracts

Diabetic retinopathy is a disorder of the eye that damages the blood vessels of the retina. The retina is the light-sensitive inner surface of the eye on which images are formed. Long-term diabetes affects the retina as high blood glucose levels can damage the tiny blood vessels in the retina. Diabetic retinopathy is broadly classified into non-proliferative diabetic retinopathy and proliferative retinopathy. Treatment for diabetic retinopathy depends on the stage of the disease and is directed toward slowing down or stopping the progression of the disease.
