Electrodes are electrical conductors that can pass energy signals from a power source to a device or a material. Electrodes are made from metals such as zinc, manganese oxide, copper, silver, cadmium, nickel, and others. Electrodes are electrochemical cells that are either called anode or cathode. In an anode, the electron leaves the cell and oxidation occurs. In a cathode, the electrons enter the cell and reduction occurs. In healthcare, electrodes assist in the diagnosis and treatment of several chronic diseases.
