Diagnostic hearing devices are audiology devices used to assist ear, nose, and throat (ENT) specialists, hearing instrument specialists, and audiologists to evaluate individuals' hearing capabilities by conducting physical and clinical diagnosis and hearing screening. Clinical and physical diagnosis detect hearing loss. However, hearing screening is performed to identify potential hearing loss. Clinical diagnosis involves the use of devices such as diagnostic audiometers and tympanometers. Screening audiometers are occupational audiometers, and physical diagnosis is performed using otoscope devices.
