Abstracts

A diamond wire loop is a cutting tool in which the wire is machined into a closed loop and then coated with diamond. They are suitable for cutting almost all materials, especially composites. This 'one-way cutting' process with line speeds of up to 50 m/s produces only a small cutting gap and therefore very little material loss. Compared to saws with diamond cut-off wheels, even parts with a cut height or depth of more than 350 mm can be cut.
