Abstracts

Dicyclohexyl phthalate is a solid plasticizer. Good fire resistance, oil resistance, light stability and migration resistance. Cold resistance and plasticizing efficiency are poor. Even if 50 parts are added to PVC, the glass vitrification temperature is only close to room temperature, so it is not suitable as a main plasticizer and can be used for moisture-proof packaging materials. This product is used in nitrocellulose and some natural resins to make moisture-proof materials.
