## Abstracts

Digital crosspoint switch is significantly considered as the next generation high speed packet switch. Digital crosspoint switches is used to transfer data at faster rate and are basically used in packet switching and telephony. Additionally, digital crosspoint switches are used in applications which include mechanical, medical, video and military among others. This is because digital crosspoint switches can handle several protocols, clock sources and data streams. Over past few years, semiconductor companies have developed chip-to-chip serial links that were deployed in various commercial routers and switches. Crosspoint switch enables high performance for two reasons, first faster data transfer and high speed data. Due to fast innovation pace coupled with changing market conditions in telecommunication industry and proliferation of standards, the digital crosspoint switch market provides opportunity for various integrated circuit manufacturers.
