Abstracts

Unlike die cutting which uses physical dies to create the shape, digital cutting uses a blade which follows a computer-programmed path to create the shape. A digital cutting machine consists of a flat table area and a set of cutting, milling and scoring attachments mounted on an arm. This arm allows the cutter to move left, right, forwards and backwards. The printed sheet is placed on the table, and the cutter travels across the sheet along the programmed path to cut out the shape.
