Abstracts

Key factors driving the market include growth focused on enhancing the end-to-end customer experience. Enterprises can be considered early adopters of digital identity solutions because they have a large workforce and associated network equipment and are vulnerable to identity-related risks. Businesses have offices in various regions, forcing them to provide solutions by giving employees real-time access to data. In addition, businesses have no budget constraints, which enables them to adopt local-based digital identity solutions. However, due to the scalability of the benefits, a major shift from on-premises solutions to cloud-based solutions is expected. Due to additional features such as access risk, excess risk and risk outliers, businesses are expected to increasingly adopt digital identity solutions.
