The Digital Mapping Camera System industry can be broken down into several segments, Linear Array Scanners (Pushbroom), Systems based on Area Arrays. Across the world, the major players cover Vexcel Imaging, Intergraph (Z/I Imaging), Leica Geosystems, IGI Systems, Phase One, Lead'Air, Inc., VisionMap, Teledyne Optech, Share UAV, etc. Digital mapping (also called digital cartography) is the process by which a collection of data is compiled and formatted into a virtual image. The primary function of this technology is to produce maps that give accurate representations of a particular area, detailing major road arteries and other points of interest. The technology also allows the calculation of distances from one place to another. Though digital mapping can be found in a variety of computer applications the main use of these maps is with the Global Positioning System, or GPS satellite network, used in standard automotive navigation systems.
