Abstracts

Digital Risk Protection (DRP) is a term describes the market of tools and technologies to protect from the risks posed by externally facing digital assets.

Digital risks can be found anywhere online, and include threats found on social media, mobile platforms and surface and deep/dark web. Social platforms such as LinkedIn, Twitter, Facebook and Youtube provide a wealth of opportunity for connection and promotion, but also run the risk of malicious actors taking to these networks to impersonate your brand and your executives, as well as scam and profit off your customer base.

Outside of social media, web-based digital risks on forums, blogs, search engines, domain registrars and the deep, unindexed web offer additional challenges. From coupon scams to counterfeit goods, bad actors use these platforms all too often for malicious activity. Increasingly, organizations are turning to Digital Risk Protection solutions for brand security, VIP protection and digital footprint mapping.
