## Abstracts

As a certain level of secrecy is required in legal proceedings, digital signature technology can be of great help in this field. A digital signature is generated using specific software and devices and ensures security of data once a document has been digitally signed. This ensures greater security to the party signing the document as well as to the one receiving it and it authenticates the identity of both the parties. The software generates a digital signature, which is unique to the person linked to the executive document in a way that if it is changed, it becomes invalid; and hence the digital signature enables the party to know that the integrity of the said document has been compromised. Digitally signed documents have a great potential in the legal field, thereby aiding the growth of the digital signature software market during the assessment period.
