Abstracts

Diphenyl oxide also known as DPO or diphenyl ether is a an organic compound with the chemical formula $O(C_6H_5)_2$. Like other phenyl rings, diphenyl oxide is subject to various reactions like hydroxylation, halogenation, nitration, Friedel Crafts alkylation and sulfonation. Diphenyl oxide is a colorless sticky liquid with a pleasant odor. Diphenyl oxide may sink or float in water depending on its density. Freezing point of diphenyl oxide is approximately 81°F. Diphenyl Oxide is easily reactive with oxidizing materials. Diphenyl Oxide can be used as a heat transfer medium when mixed with biphenyl. Such a mixture is used as heat transfer medium due to its high temperature range. Production of polyamide and polyimide also involves the use of diphenyl oxide when used in the production of phenoxathiin. Moreover, diphenyl oxide is also used as a flame retardant in the production and manufacturing of reinforced plastics and paints. Diphenyl oxide is a key product used as a raw material in the manufacturing of various industrial products namely fragrances, chemical intermediates, flame retardants and heat transfer fluids.
