Abstracts

Direct fed microbials (or probiotics) refer to living organisms and should not be confused with prebiotics, compounds that

promote the growth of gut bacteria (e.g., yeast culture, oligosaccharides) but are not living organisms. It is believed that gut

bacteria have requirements for specific nutrients that may not be adequately provided by the animal's diet. Therefore,

feeding these nutrients may promote the growth of gut bacteria, thereby improving the microbial profile in the gut.
