Abstracts

Disc slip ring is a flat type large-diameter slip ring used in rotating systems with height restrictions, also called disc conductive slip ring, disc slip ring, radial slip ring, etc. Decrease the vertical height by expanding in the plane radial space. The working principle of disc slip ring is similar to that of cap slip ring and via-hole conductive slip ring, but the structure is slightly different. The disc slip ring transmits current and signals through the contact between the shrapnel brush and the ring track around the concentric circle, and the shrapnel brush is welded on the top of the concentric circle as the stator.
