Dispersing agent MF(CAS 9084-06-4) is also known as dispersant MF. Its chemical name is formaldehyde condensate of sodium methylnaphthalene sulfonate. Dispersant MF has wide application as a dye builder. It is mainly an anionic surfactant produced by the steps of sulfonation, hydrolysis, condensation with formaldehyde, neutralization, etc. from methyl naphthalene or washing oil. Dispersing agent MF has excellent diffusibility and thermal stability. It is a brown powder, soluble in water, absorbs moisture, non-combustible, non-permeable, or foaming. It also resists acid, alkali, hard water, and inorganic salt. Dispersant MF has an affinity for protein and polyamide fibers, but no affinity for cotton, flax, or other fibers. It can mix with both anionic and nonionic surfactants, but can not with cationic dyes or surfactants.
