Abstracts

DisplayPort adapters are used to send a high-definition digital video and audio from consumer electronics such as smartphones, laptops and others to a display. Two types of DisplayPort adapters are available in the market, namely active DisplayPort adapters, which allow users to use multiple monitors with the same computer, and passive DisplayPort adapters that support dual-mode. DisplayPort adapters are widely used by people to illustrate images and video content over large screens such as television and white screen pages at home or during an event. They are also extensively used by corporates to display important information over projector screens by connecting projector devices through DisplayPort adapters to the display. DisplayPort adapters have a small form factor, and the overall cost of the system is low, which increases their usability across various devices. Also, they support multi-channel audio, 3D stereo and 4K displays.
