Abstracts

A disposable battery is a primary battery containing an electrochemical cell that stores energy in a fixed electrolyte slurry to minimize the need for water. The main advantages of these disposable batteries are their high energy output, longer shelf life, low cost and harmlessness. They are widely used in small portable devices, including toys, radios, watches and flashlights. These batteries are usually cheap and have a high energy density. In addition, these batteries work well in devices that require very low power, including flashlights and LED candles.
