Respirators are devices designed to protect the wearer from breathing dangerous air, including particulate matter such as dust and microorganisms in the air, as well as harmful fumes, vapors and gases. There are two main types: air purifying respirators, which obtain inhalable air by filtering polluted air; And air-supplied breathing apparatus, which alternately transports breathable air. Used to help prevent some particle damage. Divided into half-face respirator and full-face respirator. The half-face respirator covers the lower part of the face, including the nose and mouth.
