Abstracts

Protective coveralls for short-duration use, often referred to as “disposable protective coveralls”, were designed to protect people, processes and products. These products protect workers against chemical compounds, asbestos, dust and fibres, chemicals used in the agriculture and heavy industry as well as paints and varnishes. They protect demanding production processes and products, e.g. in cleanrooms or in the production of pharmaceuticals, as well as foodstuffs against contamination by staff. In addition, this clothing protects against contact with concentrated organic compounds and inorganic acids and bases as well as salt solutions. Furthermore, penetration tests using blood and virus simulants have shown that the specialised material used to manufacture disposable coveralls protects the wearer from other people’s body fluids and pathogens.
