Power tools find a wide application across construction activity and housing starts. Continued growth in manufacturing output will fuel demand for industrial power tools. Consumers, with little interest in the do-it-yourself tool, would outsource jobs to the professionals, while many who undertake the DIY activities will upgrade from basic to higher priced or more technologically advanced power tools. Power tools manufactured with high power consumption have high cost as compared to other batteries. For that reason, manufacturers have started manufacturing tools with Lithium-ion (Li-ion) batteries.
