A flexible PCB is a kind of printed circuit board, also called a flexible printed circuit, or FPC for short. FPC is made of adhesive material or non-adhesive material. The copper used in the FPC production process is divided into electrolytic copper and rolled copper, and non-stick rolled copper is more flexible and foldable. A double-layer flexible PCB consists of two conductive layers with an insulating layer in between. A double-layer flexible PCB is an ideal product that requires circuit density.
