Abstracts

In the drag finishing process, the work pieces are clamped in specially designed holders. These holders are dragged in a circular motion through a process drum containing grinding or polishing granulates. This high-speed motion generates high contact pressure between the work piece and the media, which in a very short time produces perfect results in the form of high-precision edge rounding, smoothing or a mirror finish in a quality equivalent to that obtained by manual polishing.

This report contains market size and forecasts of Drag Finishers in global, including the following market information:

Global Drag Finishers Market Revenue, 2017-2022, 2023-2028, (\$ millions)

Global Drag Finishers Market Sales, 2017-2022, 2023-2028, (K Units)
