## Abstracts

Dry ice blast cleaning (dry ice blast cleaning), also known as cold spray, uses compressed air as the power and carrier, and uses dry ice particles as accelerated particles, sprayed onto the surface of the object to be cleaned by a dedicated jet cleaning machine, using high-speed solid dry ice. The energy conversion of the particles' momentum change ( $\Delta mv$ ), sublimation, melting, etc., makes the dirt, oil, residual impurities on the surface of the cleaned object rapidly freeze, thereby condensing, embrittlement, and being stripped, and at the same time, it is removed with the airflow. It will not cause any damage to the surface of the object being cleaned, especially the metal surface, and will not affect the finish of the metal surface.
