## Abstracts

Dry ice-making equipment is used to produce dry ice. Dry ice is made from carbon dioxide gas. The carbon dioxide gas is pressurized and cooled to form liquid CO<sub>2</sub>. The liquid carbon dioxide is injected into either a block press or pelletizer. These dry ice-making machines have chambers in which, once released to atmospheric pressure, the liquid carbon dioxide converts to dry ice snow and carbon dioxide gas. The carbon dioxide gas is recovered and converted back into liquid carbon dioxide.
