Abstracts

Electronic toll collection (ETC) is a wireless system to automatically collect the usage fee or toll charged to vehicles using toll roads, HOV lanes, toll bridges, and toll tunnels.

DSRC (in the 5.8 GHz frequency band) is a mature technology used for bi-directional data transfer between vehicles and roadsides. The main elements of this technology are DSRC on-board units (OBUs) with read/write capabilities, and DSRC readers installed at the roadside in lanes, segments, entrances, or exits, depending on the policy and tariff of the system. Thus, modifications in the road network have to also be adapted in the roadside infrastructure.
