Abstracts

A dust proof material is a microfiber unwoven fabric which has excellent efficiency of dust prevention. A dust proof material is produced from woven (knitted) fabrics consisting of synthetic filament or unwoven fabric which are bounded by chemical, mechanical or solvent treatment. In order to prevent the generation of unwanted dust particle in most of the industries and laboratories, dust free material are used. Dust proof materials make use of antistatic treatment to prevent the adhesion of the dust particle on the surface of the material. Globally, the demand for dust proof material is expected to increase steadily due to the upsurge in research and development activities by manufactures of dust proof materials. Dust proof material is mostly preferred where clean environment is required like in the biological lab, clinical room, food processing area, industrial research laboratory, etc.
