Ablation is an advanced treatment option for various diseases such as cancers, cardiac arrhythmias, and Others medical conditions. Ultrasonic ablation is a noninvasive procedural technique that uses sound wave and is concentrated at the diseased area of the tissue, leading to heating and cellular destruction of the diseased tissue. Ultrasonic or magnetic resonance imaging (MRI) is performed that directs the ablation device to the diseased tissue. Ultrasonic tissue ablation system is designed. Radiofrequency and ultrasonic ablation devices are considered the most preferred and selected products by doctors and physicians. Ultrasonic ablation is a minimally invasive surgical procedure that involves a local anesthetic and mild sedation. This procedure is primarily used to reduce chronic low-back and neck pain caused due to degeneration of joints (due to arthritis and Others spinal conditions).
