Dynamic Truck and Trailer Suspension systems is basically advanced version of hydro-pneumatic suspension employed on trucks and trailer units. Dynamic Truck and Trailer Suspension systems are also generally known as DTS. The dynamic truck and trailer suspension system has replaced stabiliser rods, shock absorbers, air springs as well as spring assembly which were earlier installed as separate entities. In this suspension system the weight of the entire vehicle is bear by hydraulic cylinders and the suspension is provided by accumulator and the damping is provided by integrated shock absorber valve this result in an active dynamically responsive truck and trailer suspension systems. It can be connected in one or multiple rigid as well as steered axle. Also, Dynamic Truck and Trailer Suspension systems provide a uniform load distribution on all the wheels whether the vehicle is empty, partially loaded or fully loaded which also improve stability of the vehicle in uneven tracks and provide optimal comfort. Its characteristics also includes automatic adjustment of the system according to the ambient temperature. Dynamic Truck and Trailer Suspension systems is also used for changing height for the accurate positioning of the loading platform. The operation of dynamic truck and trailer suspension systems can remotely be controlled the truck without even getting out of the cabin through User interface display or with the help of PC application which ever best suited. Also, it provide ultimate driving comfort and an ideal system for the vehicle with high centre of gravity.
