Abstracts

Ear endoscopy is a kind of endoscopy instrument for examination or surgical evaluation of external auditory canal, tympanic membrane and middle ear. Ear endoscopy can observe the parts that are not easily observed by the operating microscope, such as the femoral chamber and posterior femoral chamber, etc., to timely detect middle ear lesions and reduce the recurrence rate of lesions. The advantages lie in non-trauma, high resolution of intra-auricular image, high illumination function and high diagnosis rate, which enable clinicians to master specific micro-lesions in the ear and provide timely treatment plans for patients.
