Abstracts

Edible packaging is basically a thin continuous layer of edible material which is placed on or between the foods or food components. The idea behind this technology is that it takes away the plastic and paper waste from packaging foods and wraps it in something which can be eaten as a part of the whole food product. Edible packaging provides numerous benefits such as it helps in reducing waste, provides safety to the product, creates product solidity, provides convenience to the consumers and there is no concession to the product's quality as well.
