## Abstracts

The North America bicycle market is driven by fitness-focused consumers. A large number of people in the North America region are unfit and overweight due to the unhealthy practices in their day-to-day diets. In order to overcome obesity and related health issues, consumers are showing an interest towards exercise and exercise equipment, such as bicycles. The North America region is actively responding to sustainable trends, namely exercise, healthy lifestyle, and sustainable transportation. The fifty most popular cities in the U.S. possess 8,600 miles of bicycle lanes altogether. Associations have become more operational supporters for cycle travelling. Moreover, the International Mountain Bike Association and several other groups are promoting various ways to use cycling as a performance-oriented mode of transport. Urban associations have formed societies and organizations in every zone, such as Transportation Alternatives in the New York City, to stimulate bicycling as a practice of daily exercise and transportation. This is anticipated to boost the demand for electric bicycles in the North American market in the coming years, which will promote the growth of the electric bicycle motors market in the region.
