## Abstracts

An electric lift chair is a piece of medical equipment that looks similar to a standard reclining chair. It can be used in an upright position or reclined with just the push of a button. The difference is that the lift chair contains a powerful lifting system that can be triggered to tilt the base and back of the chair forward, assisting the user in returning to a standing position. The user operates a lift chair by pushing buttons on a remote rather than manually engaging a lever or switch.
