Medium Chain Triglycerides composed of saturated Medium Chain fatty acids with a carbon Chain length of 6-12. Medium chain fatty acids are found naturally in nature, but the content is less. It mainly from palm kernel oil, coconut oil, breast milk, milk and dairy products. In palm kernel oil and coconut oil, medium chain fatty acids can account for more than 50% of the total fatty acids. Industrial mass production of MCT is generally based on palm kernel oil and coconut oil as raw materials through hydrolysis, fractionation, esterification and other processes.

MCT is a colorless, odorless liquid at room temperature, with about half the viscosity of regular vegetable oil. The carbon chain of fatty acids in MCT is short. So its relative molecular weight is small, water solubility is good, and the melting and boiling points are low. The content of unsaturated fatty acids in MCT is very low, its iodine value is not more than 0.5, compared with other vegetable oil and animal oil, MCT oxidation stability is very good. In addition, MCT and a variety of compounds have a good mutual solubility, can be used as vitamins, essence, pigment and other products solvent.

MCT in the body of the digestion and absorption is absorbed is without bile salts can be complete on small intestinal mucosa cells hairs or enter cells, absorb faster than general long chain fatty acid triglycerides, resulting in chain fatty acids in the intestinal cells don't have to esterification synthesis of triglycerides, and directly in the form of fatty acids by portal vein to the liver, without shuttle, efficient quickly in liver were decomposed to produce energy.
