Abstracts

An electrically-heated smoking system, also known as a heated tobacco product (HTP) or heat-not-burn tobacco product (HnB), uses an electric heating element to produce a smoke that contains nicotine, tar, other chemicals, and particulates. These products may match some of the behavioral aspects of conventional smoking. Tobacco companies claim these products are less harmful to consumers than other types of cigarettes, but 'there is no evidence to demonstrate that HTPs are less harmful than conventional tobacco products', according to the World Health Organization.
